

Another sleepless night, not caused by work. How long this had not happened? It's been a while.

Just found some inspirations to start the research that created lots of headache in my side project.

Why am I feeling sad now, I even haven't really communicated to that boy.

Emmanuel had been in that position of my heart more than 5 years, he was the only one who will read my updates in GitHub, the only one who will keep the same contents on LinkedIn and Facebook before my update, the only one who was there all the time when I was in my darkest days, the only one who gave me so much motivation and inspiration to be a much better me all these years, the only one... But finally, there was no happy ending.

Finally, I could still focus on my life with work, side projects, a few friends, outdoor activities, readings, etc.

Finally, I started to pay attention to someone else, totally got rid of the past.

Although nothing happened and nothing will happen.

Everything gonna be alright.

This should not take long, right? Maybe just 1 week, 2 weeks?

Why do I have emotion? Why do I still trust love but become more and more hesitate to step out even 1 step?

Not sure, but this is me. I don't do those things make me feel uncomfortable, and I don't do those things make me feel losing myself.

Everything gonna be alright.

Hey, I found a new book to feel peaceful. I read both English and Chinese books well. I'm so lucky!
